

What it takes to be an Ambassador, and who else is needed

The age rule decides the design. A Claude account requires its user to be at least 18. Most high school Ambassadors are not, so the Ambassador cannot be the person who makes changes with Claude. That job belongs to an adult, the *site keeper*. The Ambassador demonstrates, gathers feedback and stays with the owner; the keeper does the typing to Claude and the publishing.

The Ambassador

A high school student, often an FFA member. No accounts needed.

- **Written permission** from a parent or guardian, and the school or FFA chapter's OK. (minors)
- **An adult supervisor:** the FFA advisor or a teacher, who knows where they are going and when.
- **A phone or tablet with a web browser**, to show the live sites. Nothing to install, nothing to sign in to.
- **Business cards** with a QR code to their own page, and the printed Ambassador guide.
- **A way to record feedback:** the feedback page, or a notebook.
- **One training session** before the first call: show a site, use the Orange page, practice the phone-number change as a demonstration.
- **Go in pairs**, by daylight, to people the family knows.

The site keeper

An adult, 18 or over. Today, Walter. Later, a trained adult or the owner.

- **A Claude account** (18+), and the Claude desktop app on the computer that keeps the sites. (18+)
- **A Mac.** The publish buttons (PUBLISH - ALL SITES and the others) are Mac files today.
- **A GitHub account** (free) holding the sites, with **GitHub Desktop** installed. GitHub Pages hosts them free.
- **The site folders** on that Mac, each with its private log in a `claude/` folder.
- **An email address** for these accounts.

The site owner

The farm, shop or office the site is about.

- **The domain name**, in their own name and their own registrar account, with a payment card: about \$11–\$28 a year. Or a member's place under a cooperative's shared name, at no cost.
- **Decisions on the words:** what the site says, and approval of every change.
- **One-time setup of the name**, pointing it at GitHub Pages. The keeper does this with them.
